 IN - AGAEVA S I; KHAIROV K H K; ZEINALOV N E
 AB - SU-891891 A plugging compsn. for cementing gas and oil wells in which thermal activity occurs in the stratum, is made from cement, 0.3mm sand and water.
 - In order that the cement slurry shall harden satisfactorily over periods at 20-50 deg. C and that the cement facing shall be stable at 250-700 deg. C, the following plugging composition is suggested (in wt.%): gypsum-clay cement 45-51, 0.3mm quartz sand 22-30, water 26-27. Bul.47/23.12.81 (4pp)
